

Key Challenges Faced

How AURA moved from design assumptions to a working academic support system

01 Dataset Strategy

Dual-dataset fusion
created feature alignment

02 Missing GPA

First-semester students
may not have official GPA

03 Questionnaire Timing

Student support data may
arrive before academic

04 Email Delivery

Bulk alerts faced SMTP
limits and fake email

05 Deployment Reliability

Local files, secrets and
modules had to work in

Final Response

Simpler data pipeline, semester snapshots, safer alerts,
and Azure deployment with GitHub CI/CD.
